ABSTRACTED-PUB-NO: WO 200057166A
BASIC-ABSTRACT:

NOVELTY - Determination of a substrate comprises forming an electrode system using a

conductive material, and a reaction reagent comprising at least a dehydrogenase, a coenzyme, an electron mediator and tetrazolium salts, in which an enzyme reaction and a redox reaction of the reagent and substrate are carried out and the finally produced formazane is detected.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a biosensor for detecting the formazane obtained by integration of at least the reagent and conductive material-formed working electrode and counter electrode into an electrode system.

USE - For the determination of substrate e.g. amino-acids and alcohol in various samples like blood, urine, food and environmental materials.

ADVANTAGE - The method is simple, quick and accurate, with stable response current, without needing troublesome pretreatment.
